Dear Hiring Manager at Flock Safety,

My enthusiasm for Flock Safety's mission to reduce crime through ethical, technology-driven solutions compels me to reach out regarding the Software Engineer position. My blend of strong academic foundations from Virginia Tech and hands-on full-stack development experience makes me a confident candidate to contribute meaningfully to your dynamic team.

At HashedTokens, I had the privilege of spearheading the development of an OTP SaaS platform from conception to launch. This experience immersed me in AWS, Node.js, and React, culminating in a successful platform deployment. My AWS Certified Developer - Associate certification underscores my commitment to mastering cloud technologies and applying them to real-world challenges.

Beyond language expertise in React, TypeScript, Java, and AWS, my diverse internship experiences at HashedTokens, Systems Definition Inc., and Triangle Works Corporation have shaped my adaptability and ability to thrive in varied environments. I am confident in delivering high-quality code independently while collaborating effectively across teams to achieve shared goals.

Flock Safety's dedication to ethical design and building a public safety operating system deeply resonates with my values. The opportunity to contribute to scalable backend systems, collaborate with diverse teams, and directly impact crime reduction perfectly aligns with my skillset and aspirations. Flock's positive and inclusive environment further excites me, and I am eager to bring my extensive coding experience to fuel this innovative company's growth.

Thank you for considering my application. I'm eager to learn more about the Software Engineer role and discuss how my skills and enthusiasm can contribute to Flock Safety's success.

Sincerely,

Andrew Sunwoo
